

High Precision Touch Control Digital UV Radiometer

The **UV TOUCH** is designed for high reliability ultraviolet radiation measurement. Use it as a Radiometer, a Dosimeter, a Datalogger or a Controller. CAN bus signal processing gives a high five orders of magnitude dynamic range and guarantees highest interference resistance. The instrument complies with Good Laboratory Practices (GLP) and eases interfacing to Laboratory Information Management Systems (LIMS).

Use it as comfortable as your iPhone™ and feel the power and precision of digital signal processing.
